Correction: Exposure to Smoking Imagery in the Movies and Experimenting with Cigarettes among Mexican Origin Youth

In this article, which was published in the December 2009 issue of *Cancer Epidemiology, Biomarkers & Prevention*, 102 participants who were born in the US were miscoded as being born in Mexico. The error does not significantly change the results presented in Table 2 (no change to *P*-values) and hence does not impact the interpretation or the conclusions drawn. Among the 1,129 who were new experimenters, 86 participants who were born in the US were miscoded as being born in Mexico. The error does not significantly change the results presented in Table 4 (original *P*-value for Mexican-born <0.01 and for US-born = 0.68) and hence does not impact the interpretation or the conclusions drawn.

The correct data for Table 2 are as follows:

Table 2.

	N (%)	Mean exposure to smoking in movies (SD)	P	Experimenter Status		P
				Ever Experimenter	Never Experimenter	
				Mean exposure to smoking in movies (SD)	Mean exposure to smoking in movies (SD)	
Country of birth						
US	948 (73.7)	228.0 (165.93)		294.4 (168.09)	203.7 (158.43)	<0.001
Mexico	338 (26.3)	187.4 (155.17)	<0.001	246.3 (170.53)	170.5 (146.56)	<0.001

The correct data for Table 4 are as follows:

Table 4.

	Mexican-born (N = 294)			US-born (N = 835)		
	OR	95% CI	P	OR	95% CI	P
Exposure to smoking in movies	1.58	1.14–2.20	<0.01	1.06	0.88–1.28	0.54
